

BOOST ULTRABRITE

Laundry Detergent Powder with Organic Chlorine

Boost UltraBrite is a 100% active powder laundry detergent that is powerful but safe to use on all white fabrics. This product is designed for industrial and agricultural uses where high soil loads necessitate a strong product.

This product will remove organic and protein-based soils other products do not touch. These soils include grease, blood, grass, and oil.

Boost UltraBrite generates controlled suds that dissolve soils and hold them in suspension during the wash cycle. This product works well in commercial, automatic, and conventional washing machines, including HE-compliant ones.

This product contains organic chlorine and will fade colored fabrics. Although it will fade colors over repeated uses, this product is gentler than liquid bleach on microfiber.

Physical Properties (Typical)

Appearance	White powder
Odor	Characteristic
pH	N/A, not aqueous
Density	1.02 (Water = 1.00)
Melting Point	Not available
Solubility in water	Complete at recommended dilutions

Directions for Use

- Use 2 oz per 10 pounds of laundry
- Usage may vary based on soil and water conditions

Boost UltraBrite does not contain any nonylphenol ethoxylates (NPEs). Therefore it is better for the environment and faces fewer regulatory restrictions and environmental implications than similar NPE-containing products.
