

SWINE HYGINE PROGRAM

Results Oriented • Chemical Sanitation Solutions • Consulting Support

Chemical Technology

Supplying your swine facility with the cleaning technology you need for an advanced confinement operation

Today's modern swine facilities require daily critical tasks to protect the animal health and farmer profitability. As we continue to tighten our bio-security programs on large swine production operations do not forget to focus on the cleaning and disinfection program for each building. Proper hygienic procedures for chemical cleaning and disinfection will help prevent disease, increase growth rate and reduce production costs. Since the cleaning and washing of facilities is often a disagreeable task it is often overlooked and not given the proper emphasis or training to lead to reliable results. With DeVere's proven chemistry and training, you can help yourself improve results and make more money.

Comprehensive Cleaning and Sanitation

Products, training and techniques come together to get better cleaning results

The key to better results is to take a comprehensive approach using the modern techniques developed in the large slaughtering and food processing facilities that require the highest levels of sanitation for the consumer. These techniques allow large facilities to clean and sanitize all floor, walls and equipment surfaces and get them back into production is a matter of just a few hours. DeVere's swine hygiene programs teach and apply these principles.

- Dry cleaning must remove most gross soils
- Unique presoak application will soften and pre-digest soils
- Pre-rinse to remove a high percent of loosened soils
- Foam cleaner application
- Power wash all surfaces while foam is present
- Final rinse
- Inspect results
- Foam sanitize all surfaces, allow to dissipate and dry
- Use Security Floor Treatment on concrete and at door openings

PROGRESSIVE CLEANING SOLUTIONS

CHEMICAL SOLUTIONS

With over 55 years in the business, we have the knowledge to solve the most difficult cleaning challenges while being small enough to know and work closely with all our customers.

CUSTOM SOLUTIONS

We realize that not all cleaning challenges are the same. We will customize formulations for key applications and customers.

TRAINING SOLUTIONS

DeVere will provide training materials and on-site support as needed by our customers. We have an extensive library available to support the continuing education of your employees.

EQUIPMENT SOLUTIONS

DeVere has the equipment needed for the proper application of all our chemical products.

Industrial Chemical Products for Swine Operations

Security Floor Treatment

This patent pending floor treatment combines alkalinity and multiple oxidizing compounds for superior performance. Surfactants ensure that this product will penetrate into all cracks, crevices, and porous surfaces where conventional products do not touch.

Deltasec Drying Agent

Deltasec is the most absorbent drying agent available for livestock applications. This product will absorb more than twice its weight in water.

Caustic Foam

Caustic Foam is a concentrated, premium, high foam, built alkaline detergent and does not contain chlorine. It is designed for challenging foam and manual cleaning applications where high foam characteristics are desirable.

QDII Sanitizer

This product is a disinfectant, sanitizer, deodorizer, mildew-stat, and a strong virucide. This product is EPA registered as a food-contact surface sanitizer as well as a general purpose hard and soft surface sanitizer.

Soak Down

Soak Down is a concentrated blend of surfactants, detergents and wetting agents designed to allow for soil penetration and soil digestion when applied in the pre-soaking step in swine facilities. Soak Down allows the solution to fully wet and penetrate the surface so dirt and fecal material is readily loosened and removed.
